

Maritime balconies

Product overview

About Balco

The Maritime segment started in 2015. Since then we have successfully completed several deliveries for new-builds.

Balco has delivered innovative balcony solutions under its own brand since 1987 and has been listed on the stock market since 2017. We control the entire chain from product development to production in our own manufacturers.

We make sure that you get the help and support you need during the entire balcony process, from the initial financing to the final inspection. High quality and long experience in combination with a healthy and solid economy make us a safe and stable partner.

Our head office with its own production and in-house development unit is located in Växjö, Småland, and we have subsidiaries in Norway, Denmark, Finland, England, Germany, Poland and the Netherlands.

- ✦ Founded 1987 in Växjö, Sweden
- ✦ Started Maritime segment in 2015
- ✦ Over 400 employees
- ✦ In-house product development and production at our HQ in Sweden
- ✦ Main contractor for building projects in seven countries
- ✦ Turnover 2020 was > 1,2 billion SEK (~120 million EUR)

Lightweight, custom maritime balconies

Balco's Maritime segment is focused on providing custom made balcony solutions that can withstand the harsh environment of a modern cruise ship in global operation.

We strive to make products that are light weight , require a minimum of maintenance and that are highly durable.

A flexible partner in operations

Apart from balconies, Balco can also provide a variety of other products and services. We have delivered and installed drainage systems, glass works, prefabricated steel assemblies and more. We are always up for a new challenge.

Our on staff design and calculation engineers are available to find the best solutions considering regulations, structural integrity and economy.

Thanks to our modern production units, we can do a majority of machining and welding in-house.

Suppliers

We only select suppliers that are at the highest level of their respective fields. This guarantees that we can provide the best service for our clients.

Just to mention a few of them:

- 🚧 3A Composites GmbH
- 🚧 Blücher Metal A/S
- 🚧 Bolidt Synthetic Products B.V.
- 🚧 C Marine AB
- 🚧 Hydro Extrusion
- 🚧 Norac A/S

Complete balcony units

Whenever the circumstances allow, we make balconies complete with balustrade and floor connected as a unit. This allows us to reduce the installation times, which in turn leaves more time for other installations in the area.

Pre-assembled balcony units are lifted and secured in place within minutes.

Balustrades, handrails and floors

Balustrades

We maximize the glass for an unobstructed view while other components are hidden as much as possible. We have solutions for installing our balustrades on existing decks or as part of a complete balcony unit with aluminium floor. The glass can be tinted or even screenprinted in patterns or to create a frosted effect. Curved glass, special geometry or segmented balustrades can be used to follow curvatures of the ship's deck.

Handrails

Our light weight aluminium handrail receives a special finish that gives it the look of a traditional wooden handrail, but without the maintenance or environmental impact. A variety of different designs are available to give designers more freedom of choice.

Floors

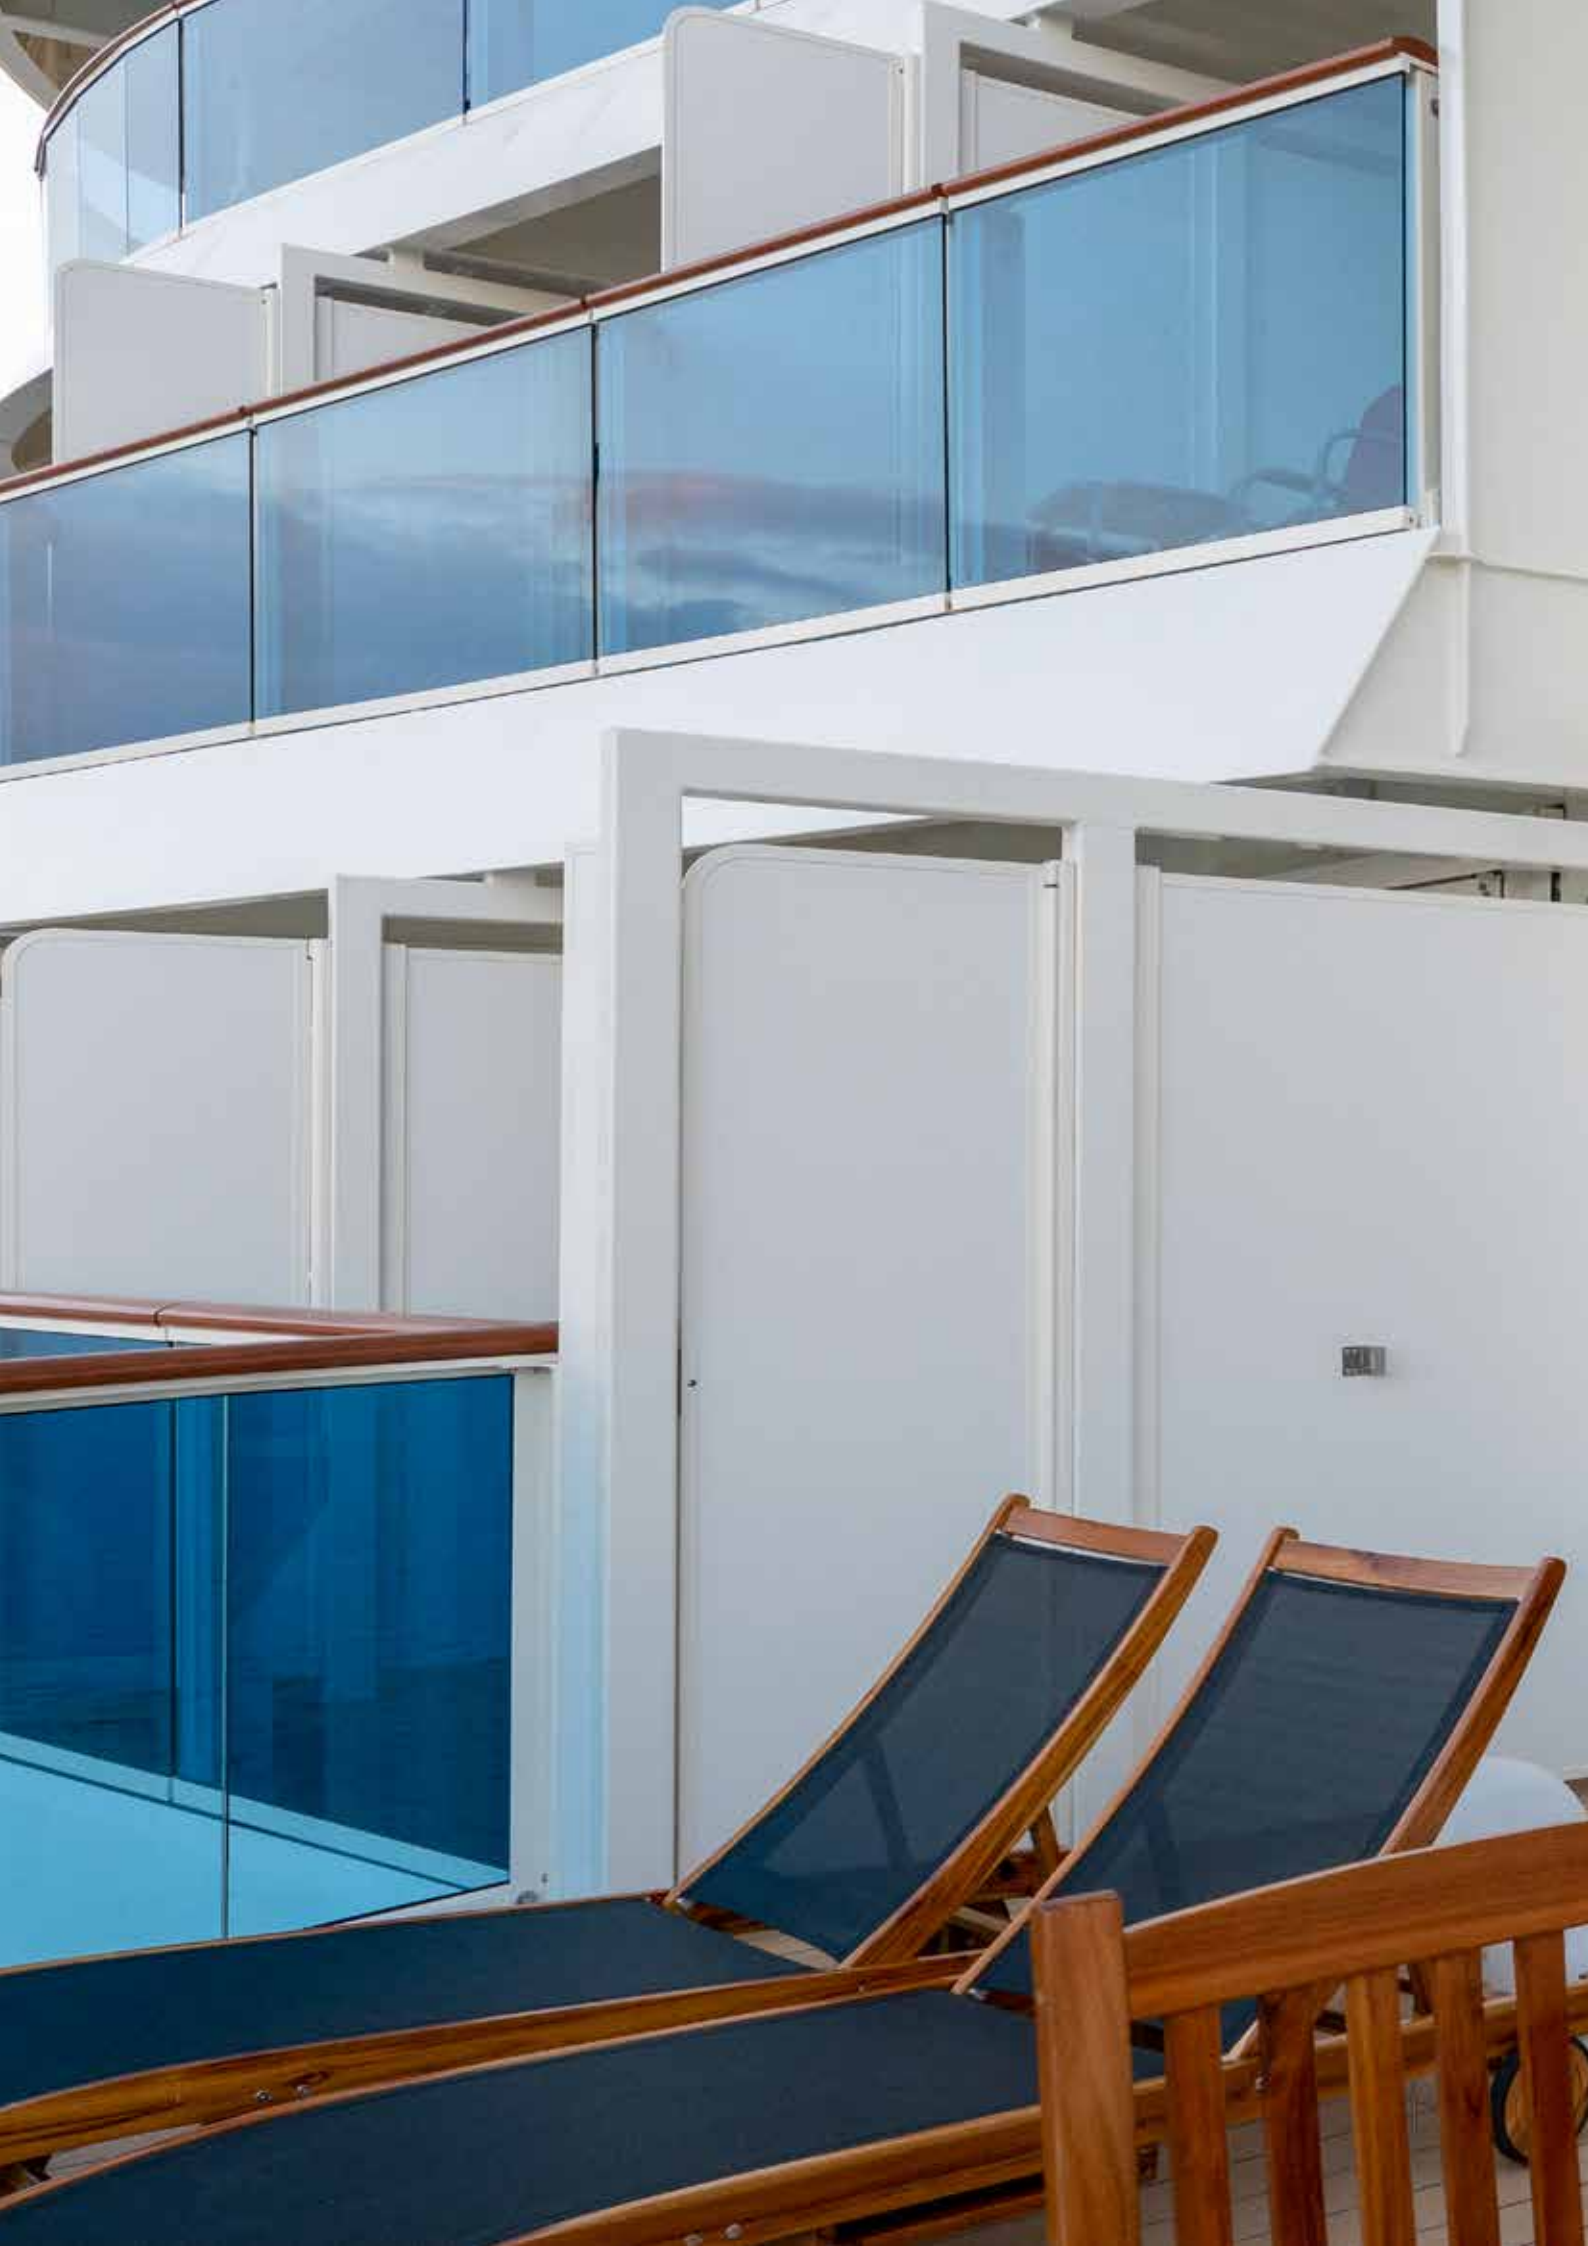

Our floors are made of aluminium profiles and can be coated with standard deck covering compounds.

Divider walls

Using high-strength honeycomb panels, our divider walls can be built both strong and light. A part of each wall is normally made openable with a key, to allow maintenance and cleaning operations to proceed without entry through the cabins.

Wall and ceiling systems

Through our partners, Balco can provide and install wall and ceiling systems for cabins or winter gardens. These are proven systems with the correct fire ratings and all the necessary certificates.
